

PS-CC2 PRESSURE SENSOR

ASSEMBLY RECOMMENDATIONS

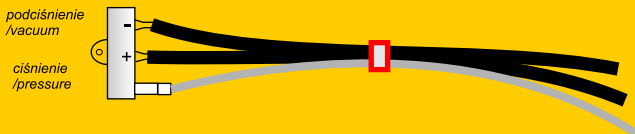

Please mount the integrated vacuum/pressure sensor with the following recommendations in order to maximize lifetime and eliminate malfunction:

** Do not mount the sensor in the vicinity of heat sources (i.e. directly on the engine, close to the exhaust). Do not cover the sensor nor use any partition.

** Do not mount the sensor rigidly to the vehicle chassis.

** Use long hoses for connecting vacuum and pressure, this eliminates stresses and vibration transfer.

PS-CC2

It is recommended to fasten hoses and electrical cable together, using a plastic clamp (avoid crumpling the hoses).
